

# 28 September is UN International Day for Universal Access to Information!

## What can we at GLOBE do to make data access universal?

### **Make communications multilingual and accessible!**

- Publish on pre-print servers (e.g. arXiv, bioRxiv)
- Publish manuscripts in open access journals
- Translate research paper abstracts
- Translate software documentation
- Subtitle and/or transcribe recordings
- Use alternative text features to describe visual communications

### **Make data FAIR!**

- F**indable: Use persistent, machine-readable metadata
- A**ccessible: Can be read via free and open software
- I**nteroperable: Should be readable without specialized translation or algorithms
- R**eusable: Metadata and data should be well-described so it can be replicated

Brought to you by the GLOBE Diversity Programme Steering Committee #AccessToInfoDay
