## Short presentation

Since my Marie Skłodowska Curie Fellowship here at the Centre for Textile Research (CTR), University of Copenhagen, I have been part-time project team member in THREAD (the Textile Hub for Refugee Empowerment, Employment and Entrepreneurship Advancement in Denmark). This is a pioneering scheme supported by the Danish government's Innovation Fund, which promotes "Grand Solutions" to key challenges in today's society. The project is built around a textile craft and culture network drawn from the CTR's contacts in archaeology, history, handicrafts, fashion, and philology to build on collaborative partnerships with other organisations both academic and commercial. It aims to demonstrate how a dynamic network can provide opportunities for refugees - who bring potential rather than problems to Denmark - to build new lives for themselves.

My Knitting in Early Modern Europe (KEME) research project continues to focus on the 100+ knitted caps which I studied in museum collections worldwide. Despite their diverse locations, they have remarkable similarities in their materials and manufacture. The main outcome has been a themed issue of the *Archaeological Textiles Review* (no 60), which proposes and tests the first protocol for the scientific reporting of evidence for knitting. Visit my online **database** to see most of the knitted caps reported in detail and for a full list of my **publications**. I have also pioneered the use of **citizen science** in textile research with an experimental archaeology project investigating the effects of fulling on different fleece types.

I now plan to take advantage of cutting-edge scientific study techniques (including radiocarbon dating, scanning electron microscopic examination, x-radiography, DNA analysis and proteomics) to discover new knowledge about these remarkable survivals of ordinary men's dress. I am seeking collaborators and co-authors with access to labs where these analyses can be carried out to demonstrate the potential for learning from the "re-excavation" of material with doubtful provenance which has been long-buried in museum stores. The aim is to report negative as well as positive results to show the limitations of these techniques alongside revelations which bring exciting new stories to light.
